Business readers are predictable. They usually read for information, not for pleasure. They are constantly under pressure from other demands that compete for their time. The thoughtful writer tries to convey as much information as possible, accurately and as clearly as possible, in as little reading as possible.

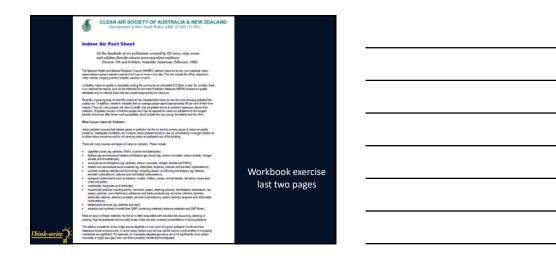

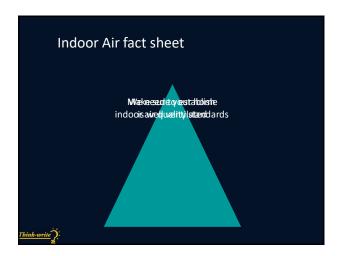

Business reading is different to reading a novel. Don't try to hold your readers in suspense. Get to the point fast. Often a reliable headline is all readers need. Readers are eager to put your document aside as soon as they decide they have all they need.

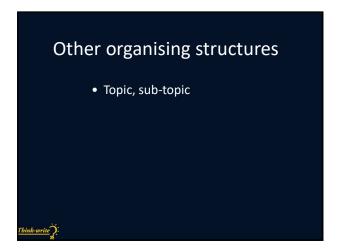

The skilful writer ensures really important information is received properly. What is the one statement about which a writer would be willing to say: "It's all right if my readers read nothing else". That should appear at the beginning. And if it does, it may be truly all right if the reader reads nothing else.

Think-write

In wanting to stop early, the reader is not lazy or irresponsible; the reader is reading only for information, is busy, and is eager to receive important information quickly, then move on.

Mentor's Message: Reader-Focused Writing Gets Results ix
Writing for Business: The Basics 1
Foundation Principles 3
Like everything of consequence, good writing rests on a number of principles.
Clarify your purpose 4
Take a reader-centered approach 5
State your key message clearly 6
Keep the message short and simple 7
Confirm your delivery strategy 8
Scope Your Project 13
Before you begin writing, always "scope" the project. Scoping means determining the breadth of your subject and deciding how deeply you will corer it. A good job of scoping will save you and your audi- ence unnecessary time and work.
Broad versus limited scope 14

	Benefits of salary sacrificing super contributions
	If you make super contributions under an effective salary sacrifice arrangement, there may be benefits for both you and your employer.
	Super contributions are not a fringe benefit
	If salary sacrificed super contributions are made to a complying super fund, the sacrificed amount is not considered a fringe benefit for tax purposes.
	Your employer will not:
	 be liable to pay fringe benefits tax (FBT) on the super contributions, and need to include the super contributions as a reportable fringe benefit amount on your payment summary.
	Salary sacrificed contributions are treated as employer contributions.
	If salary sacrificed super contributions are made to a non-complying super fund, the contributions will be a fringe benefit.
	Your employer will:
	 be subject to FBT on the sacrificed amount, and need to record the sacrificed amount on your payment summary as a reportable fringe benefit.
	Super contributions are deductible for your employer
	If you are under 75 years of age, your employer can usually claim a tax deduction on the amount of salary sacrificed contributions they contribute to your super fund on your behalf.
	Salary sacrifice reduces your assessable income
	The sacrificed component of your total salary package is not assessable income for taxation purposes. This means that the sacrificed component is not included as income on your payment summary and is not subject to pay as you go (PAYG) withholding tax.
	Super contributions are concessionally taxed in the fund
	If you make super contributions through a salary sacrifice agreement, these contributions are taxed in the super fund at a maximum rate of 15%.
	Generally, this amount of tax is less than what you would pay if you did not enter into a salary sacrifice agreement and instead were subject to PAYG withholding tax on your earnings.
	However, the concessional tax treatment is limited to a set amount of contributions made each income year.
100	For more information about concessionally taxed contribution limits, see " <u>Salary sacrifice limits</u> ".
